

UK Public Sector Community of Practice for Organizational Conceptual Constellations and Systemic Practice

Our Core Purpose

To help experts and practitioners that are utilising a systemic lens for their organizational development (OD) work to support, resource and challenge each other. To ensure that we keep our professional skills and domain knowledge up-to-date, within this particular paradigm or approach to change. Please note that to fully participate/contribute, you would have needed to have successfully completed the formal training programme for either family and/or organizational constellations.

Our Objectives

The objectives are to:

- Practice the hands-on skills of Conceptual Constellations
- Advance their practical knowledge of the area
- Share their experiences and co-learning through a participative form of action research, such as co-operative inquiry
- To bring their professional and personal inquiries to a place from which to be strengthened and resourced as experts and practitioners
- To advance the field through innovation, by field testing new ideas and approaches

How often and where?

The community members will meet four times during the year. This will ensure the right balance between a depth of practice and quality of relationships underpinning co-supervision with being busy public sector professionals.

The meetings will be in London and will initially be 1-day.

The curricula and experiences will evolve given the emergent needs of the community members over time.

Next steps

To disseminate the potential 'offering' and assess the number of individuals that are willing and interested as outlined above.
